

PRODUCT SPECIFICATION & HANDLING SHEET

Epithalon

10 mg

SKU TAD-EPI-10 · Longevity & Cellular

SPECIFICATIONS

Compound	Epithalon — synthetic tetrapeptide (Ala-Glu-Asp-Gly)
Strength	10 mg
Format	Lyophilised powder
Purity	≥ 99% (HPLC verified)
Identity	Confirmed by mass spectrometry
Certificate of analysis	Included with every batch
Storage	2–8°C; –20°C for long-term
Dispatch	Tracked, from the UK

HANDLING & STORAGE (RESEARCH SETTING)

- ◆ Store the sealed lyophilised vial dry and away from light; –20°C suits long-term storage.
- ◆ Reconstitute with bacteriostatic water (0.9% benzyl alcohol) where a solution is required.
- ◆ Hold a reconstituted solution at 2–8°C and work with it over roughly four weeks.
- ◆ Do not repeatedly freeze and thaw a reconstituted solution; divide into single-use aliquots instead.
- ◆ Let a cold vial reach room temperature before opening to avoid condensation.

Reconstitution arithmetic (concentration, diluent volume, unit conversions) is covered in the TAD Reconstitution guide. This sheet provides no human or veterinary dosing guidance.
